

Sapiens OS HealthSpan

**We can measure the human body continuously.
We still can't help most people act on it.**

Wearables, health apps, and lab platforms have made measurement abundant. Prevention still breaks at execution.

THE PROBLEM

Prevention doesn't fail on data. It fails on execution.

43M+

deaths globally (2021) from noncommunicable disease — driven largely by modifiable behaviour

WHO, 2025

~21%

of all EU deaths (2021) tied to lifestyle risk factors — about 1.1M people

OECD / European Commission, 2024

50%+

of years lived after age 65 in Europe are impaired by chronic illness or disability

OECD / European Commission, 2024

21% → 29%

EU population aged 65+, 2023 to 2050 — the burden is growing, not shrinking

OECD / European Commission, 2024

We do not have a sensing problem. We have an adherence and execution problem.

People don't fail because biometrics are unavailable. They fail because execution competes with stress, time scarcity, cognitive overload, and fragmented tools — a behavioural-science problem, not a dashboard-design problem.

The execution layer — between signal and action.

Not another dashboard. Not another lab report. Not general-purpose health AI. Sapiens OS HealthSpan ingests wearable, Apple Health, and (Phase 2) lab data, and resolves it into one personalised next action — built for stressed, time-poor people who don't need more information. They need prioritised execution.

Grounded in implementation-intention research: specifying when, where, and how an action happens is what closes the gap between intention and behaviour — not more dashboards.

- Privacy-First · EU Hosted
- Device-Agnostic
- Non-Medical · Coaching Only
- Phase 2: Lab Results

Proof first. Then build. Then scale.

Now

Months 0–5

- Paid founding-member beta (up to 20 members, manual delivery)
- 10-pillar intake, weekly reviews via email/Loom
- Demand validation before a single line of app code
- Building the outcome dataset from day one

Next

Months 2–8

- iOS MVP: onboarding, 10-pillar score, daily prompts, weekly review, Apple Health read
- First 100 paying members at €399/year
- ENISA non-dilutive loan application
- Warm B2B pilots: coworkings, founder communities

Horizon

Year 2–3

- Phase 2: lab result upload, biomarker dashboard, 6-month re-test cadence
- Sequential EU expansion: Spain/Cyprus → DE/NL/Nordics/UK/CH
- Clinician-review paid add-on (liability offload)
- Proprietary behaviour-change dataset → durable moat

Measurement scaled. Adherence didn't. That's the market.

€4M ARR

at 10,000 members · achievable Year 3

€399/yr

core membership · ~€1/day price anchor

~\$186B

global wearables market by 2030 · 13.6% CAGR

Grand View Research via Vogue, 2025 (est.)

29%

share of EU population 65+ by 2050, up from 21% in 2023

OECD / European Commission, 2024

**Wearable data
now normalised**

**Longevity moved
from niche to mainstream**

**EU health systems
prioritise healthy longevity**

**AI cheapens
personalised interpretation**

**Privacy concerns favour
trusted EU infrastructure**

WHOOP and Oura own the wearable. Apple owns the record. Function and Superpower own the labs. ZOE owns nutrition. Neko and Zoï own episodic prevention.

The unresolved layer is continuous behaviour execution across these inputs — that's Sapiens OS's lane.

THE ASK

€300K–€400K Pre-Seed

Post-money SAFE. Raise opens after paid-beta traction is established — capital raised on proof, not promise. Complemented by an ENISA participative loan (non-dilutive, Spain Startup Law) to extend runway and reduce angel dilution.

TOTAL ASK (MODELED)

€350,000

Product Build	27%	€95,000
Regulatory, Legal & Privacy	11%	€38,000
Medical & Scientific Advisory	9%	€32,000
Founder Runway & Operations	43%	€150,000
Contingency Reserve	10%	€35,000

18-month runway. Full line-item breakdown with rate assumptions: Appendix.

Founder-led. Advisory-backed.

Vladislav Andreev — Founder & CEO · Barcelona

Executive coach and entrepreneur with 15,400+ LinkedIn connections and 1,700+ newsletter subscribers in the EU founder/executive community. Former mental-health educator. Edge: systems thinking, nervous-system-first protocols, turning complexity into minimum-effective-dose interventions. Owns protocols, messaging, partnerships, and sales. Legal entity: One Species Limited, Cyprus.

Medical & Scientific Advisory Board

Being assembled · retainer + equity. 2–4 advisors. Evidence hygiene, protocol validation, red-flag and referral rules.

iOS Contractor (nearshore)

Hiring · 8–12 week MVP build. Senior iOS developer, scoped, milestone-based engagement.

Fractional DPO + Privacy Counsel

Contracting · EU compliance. GDPR Article 9 architecture, DPIA, EU hosting compliance, investor-DD-ready.

The moat is the combination.

01

The unresolved layer

Wearables, records, and labs are owned. Continuous behaviour execution across all of them isn't — that's the lane Sapiens OS occupies.

02

Execution backed by behavioural science

One prioritised action isn't a simplification. Implementation-intention research shows specifying when, where, and how is what closes the intention-behaviour gap.

03

EU privacy as trust infrastructure

Only 34% of consumers trust companies to be clear about data use (Deloitte). EU-native, GDPR-by-default is a growth and trust lever — not a compliance cost.

04

Executives are the wedge, not the ceiling

Highest willingness-to-pay, most acute pain, fastest path to paid traction — proof for the much larger preventive-health-infrastructure market beyond it.

05

Founder distribution

15,400+ LinkedIn connections. 1,700+ newsletter subscribers. Zero paid marketing needed for the first 1,000 members.

06

Validate before raise

Paid beta before any tech build. Every founding-member interaction instrumented from day one — the proprietary outcome dataset is the long-run moat.

NEXT STEP

Sapiens OS exists because prevention still fails at execution.

We're building the execution layer European high performers can trust with their data — starting with the segment that feels this gap most acutely, and proving it before we scale it.

If you invest in EU healthtech, behaviour-change software, or longevity infrastructure — let's talk.

Sapiens OS HealthSpan is a lifestyle education and behaviour coaching platform. It does not provide medical advice, diagnosis, or treatment. The 150-year healthspan horizon is a narrative aspiration, not a medical promise.

osapiens.expert/healthspan

Product Build & Regulatory / Legal / Privacy

PRODUCT BUILD — €95,000 (Months 1–8)		REGULATORY, LEGAL & PRIVACY — €38,000 (Months 0–6, ongoing)	
iOS MVP build (senior nearshore freelancer, ~10 weeks)	€22,500	Spain SL / Cyprus structure — legal setup & review	€4,000
Backend + API infrastructure (HealthKit, push, database)	€18,000	GDPR Article 9 architecture + DPIA	€9,000
AI/LLM coaching engine (dev + 12mo production inference)	€8,500	Fractional DPO retainer (18 months)	€11,700
Post-launch iteration (part-time, ~10 months)	€22,500	Privacy policy, ToS, data processing agreements	€5,300
Phase-2 labs: OCR + biomarker dashboard build	€18,000	MDR non-classification legal opinion	€5,000
Phase-2 labs: flag-to-protocol clinical mapping	€5,500	Trademark / IP filing (Sapiens OS framework, EU)	€3,000

Planning estimates based on typical EU nearshore/freelance and Spain/Cyprus professional-service rates as of mid-2026 — not vendor-confirmed quotes. Validate before finalizing.

Medical Advisory & Founder Runway / Operations

MEDICAL & SCIENTIFIC ADVISORY — €32,000 (Months 0–18)	
Advisor retainers (3 advisors × €450/mo × 18mo)	€24,300
Quarterly protocol validation workshops	€4,200
Advisor agreement legal docs	€1,500
Red-flag / referral protocol design sprint	€2,000

FOUNDER RUNWAY & OPERATIONS — €150,000 (Months 0–18)	
Founder stipend (18 months @ €3,500/mo)	€63,000
EU hosting & infrastructure	€9,000
Software & tooling	€6,500
Corporate administration (Cyprus CSP, filings, banking)	€7,200
Accounting & bookkeeping (Spain + Cyprus)	€8,400
Insurance	€4,500
Travel & business development	€9,800
Founding-member beta delivery tooling	€4,000
Part-time community/ops contractor (mo. 12–18, contingent)	€18,000
Working capital reserve	€19,600

Contingency Reserve (€35,000 — 10% of total raise) is held separately; see slide 6.

Indicative Spend Phasing

Phase	Months	Focus	Est. Spend
Now	0–5	Legal/GDPR setup, advisory board assembly, beta delivery, founder runway	~€70,000
Next	2–8	iOS MVP build, backend/AI engine, continued founder runway	~€130,000
Horizon	9–18	Phase-2 labs, contingent ops hire, scale operations, contingency reserve	~€150,000
Total	18-month runway to next milestone		€350,000

This is indicative phasing, not a contractual cash-flow schedule. All vendor costs (development, DPO, advisory) are planning estimates pending fixed quotes — to be validated before finalizing.
