

O!SAPIENS

Sapiens OS · SapiensOS HealthSpan

BRAND STRATEGY DOCUMENT

Master Reference · Version 1.0 · 2026

"The EU's practical longevity operating system for high performers."

Developed by Vladislav Andreev — Barcelona

1. Brand Architecture

Two distinct but inseparable layers power this venture. Understanding their relationship is the single most important thing to keep aligned as the business scales.

1.1 The Two-Layer Model

O!Sapiens	The master brand. Public-facing identity. Emotional resonance. Storytelling and community. The "O!" is epiphany — the moment of realization, awakening, self-recognition. This is what people feel and talk about.
Sapiens OS	The system and method behind the brand. The 10-pillar neurobehavioral framework. The product architecture. The intellectual property. This is what the product does.
SapiensOS HealthSpan	The commercial iOS product. The revenue engine. Privacy-first, Apple ecosystem, EU-focused. Behavior OS, not a dashboard. Powered by Sapiens OS, branded under O!Sapiens.

1.2 Product Line Architecture

Current and planned products sit under the O!Sapiens umbrella, each differentiated by background color and named to signal depth:

Product	Color Signal	Purpose
OS 101	Deep blue (#191795)	Entry-level introduction. Skeptical first-timers.
OS Foundation	Sand (#EACEAC)	Core protocol. Committed beginners.
OS Transformation	Sage (#D4E6D5)	Advanced framework mastery. System-thinkers.
OS Reboot	Light grey (#F0F0F0)	Recovery / re-entry track.
SapiensOS HealthSpan	Deep blue primary	iOS app: the B2C commercial product (Phase 1).

Note: "OS 101 / Core / Deep" naming from earlier brand iterations is now superseded by the visual product line above. Use the current naming in all external comms.

2. Brand Essence & Positioning

2.1 Core Statements

Brand Essence	"The science of self-agency." We translate neuroscience into felt clarity.
Brand Promise	Feel control — over your energy, your decisions, your life.
Brand Purpose	To restore a sense of internal stability in a world overloaded with noise, anxiety, and pseudo-knowledge — through daily practices grounded in real neuroscience and behavioral design.
One-liner (App)	"From health data to daily action: the longevity OS that makes healthspan habits stick."
North Star	A 150-year healthspan horizon. Aspirational narrative — never a medical promise.
Positioning	"The EU's practical longevity operating system for high performers."

2.2 Positioning Statement (Full)

For high-performing executives, founders, and system-thinkers aged 35–55 in the EU who want clarity without the noise — Sapiens OS is a science-built behavior operating system for mental resilience, sustained energy, and longevity. Not a lifestyle trend. A cognitive upgrade.

2.3 Cultural Tension (Brand Story Engine)

People are drowning in wellness tips, biohacking content, and TikTok gurus. Everyone tells you what to do — no one explains why it works, or how to make it stick for your body and schedule. O!Sapiens doesn't add to the noise. It cuts through it. We are not a morning routine. We are a cognitive map through chaos, grounded in science, resolved into action.

"This isn't optimization. This is orientation."

2.4 Brand Identity Dimensions (Aaker Framework)

Dimension	What it means for us	How it expresses
Functional	A system grounded in neuroscience, chronobiology, and behavioral design	10-pillar framework, evidence citations, data integrations
Emotional	"I feel like the architect of my own internal ecosystem"	Coaching tone, personalized daily prompts, weekly reviews
Self-expressive	"I'm not chasing trends — I'm designing my cognitive environment"	Premium positioning, intelligent copy, no hype
Cultural role	A navigator of the neuro-wellness era: from chaos to clarity	Thought leadership, founder brand, community

3. Ideal Customer Profile

3.1 Primary ICP — Phase 1 (B2C)

Who	Senior executives, founders, high-level professionals
Age	35–55
Location	Spain and Cyprus (Phase 1) → Germany, Netherlands, Nordics, UK, Switzerland
Devices	iPhone + wearable (Oura, WHOOP, Apple Watch, Garmin)
Pain points	Sleep disruption, energy crashes, stress reactivity, decision fatigue, early burnout. Performance declining despite doing "everything right".
Attitude	Skeptical of hype. Already bought the supplements. Read the books. Want something that actually works — and is private.
Motivators	Longevity ROI. Competitive edge. Staying sharp for the next 20 years. Not just living long — performing well for longer.
Price sensitivity	Low. Pays for quality tools. €399/year (~€1/day) lands as obvious value vs. what they waste on one bad night.

3.2 Secondary ICP — Phase 2 (Warm B2B, from Month 6)

Coworkings, founder communities, professional associations, and executive coaching groups. Distribution is warm and relationship-led — not procurement-heavy enterprise. The product doesn't change; the acquisition channel does.

4. Tone of Voice

4.1 Voice Principles

Intellectual, not elitist	We explain how things work. We don't gatekeep or use jargon as a shield.
Science-backed, not soul-less	We don't dismiss emotion. We build resilience through it. Biology and humanity are not in tension.
Zero bullshit	No fluffy inspiration-talk. No pseudo-profound one-liners. No vanity metrics.
Calm and credible	Emotionally resonant without exaggeration. Educational, not preachy.
Warm but not soft	Respectful, direct, and real. We call things what they are.

4.2 What We Never Say

- "Optimize your life" — too generic, too hustle-culture
- "Biohack your way to 150" — too gimmicky, violates medical caution
- "Proven to..." / "Clinically proven to..." — medical claim territory
- "Transform yourself in 30 days" — outcome guarantee, non-compliant
- "The #1 longevity app" — unverifiable superlative

4.3 Regulatory Language Rules

These apply to all copy — app, website, social, investor decks, onboarding.

Instead of...	Say...	Why
"This will improve your sleep"	"Designed to support better sleep"	Removes outcome guarantee
"Prevents burnout"	"May help reduce burnout risk factors"	Prevention = medical claim
"Clinically tested"	"Evidence-informed" / "science-backed"	Avoids MDR trigger
"Treats stress"	"Supports stress regulation"	Treatment = medical device territory
"Extend your lifespan"	"Support your healthspan journey"	Lifespan extension = medical claim

The 150-year horizon is always an aspirational north star — a narrative framing, never a promise or predicted outcome.

5. Visual Identity System

5.1 Colour Palette

Colour	Hex	Usage
O! Blue (Primary)	#191795	Brand primary. Headlines, logo, CTAs, product covers, UI primary actions.
Soft Sand	#EACEAC	Warm accent. OS Foundation product line. Human, approachable moments.
Sage Green	#D4E6D5	Calm accent. OS Transformation product line. Recovery, rest, nature.
Near White	#F0F0F0	Background, negative space. OS Reboot product line. Clean, minimal.
Dark Text	#1A1A2E	Body copy. Deep, readable, sophisticated.

5.2 Typography

Palatino	Product line naming and decorative display. Used for "OS 101", "OS Foundation" etc. Serif gravitas — signals knowledge tradition.
Montserrat Bold	Headlines and section titles. All caps for brand name "SAPIENS". Strong, modern, legible.
Montserrat Regular	All body text, UI copy, onboarding flows, push prompts. Clean, neutral, accessible.

5.3 Logo & Mark

The core mark is "O!" — a bold exclamation that reads simultaneously as the letter O and the moment of epiphany. The word "SAPIENS" runs in Montserrat Bold uppercase beneath.

The O! mark adapts across product lines by changing background color (Blue / Sand / Sage / Light) while the mark itself remains constant. This creates a coherent family with visible differentiation.

Photography inside the O mark: contextual imagery (nature, body, architecture) crops inside the letterform for product-specific visual identity.

5.4 Design Principles

- Generous white space — calm, not cluttered
- Single accent color per communication — no color competition
- Data visualizations are minimal: progress arcs, pillar bars, not medical-style dashboards
- Photography: natural light, high-performing calm (not gym-selfie energy, not clinical white)
- No gradients, no glow effects, no tech-bro dark-mode defaults

6. Messaging Framework

6.1 The Three Pillars of Communication

Pillar	Core Message	Proof Points
Your biology is a system	"Your brain is not a mystery — it's a system." We explain how clarity, recovery, and decision-making actually work.	10-pillar framework; neuroscience citations; chronobiology protocols
Science-backed + human	"Science-backed doesn't mean soul-less." We don't dismiss emotion. We build resilience through it.	Polyvagal theory; trauma-informed design; social connection as a pillar
Micro-practice, macro-agency	"Micro-practices. Macro-agency." 7 minutes a day isn't laziness — it's architectural thinking.	Minimum-effective-dose principle; daily push prompts; "next 3 moves"

6.2 Launch Message Hierarchy

Claim	A daily behavior operating system for longevity.
Proof	Built on circadian neuroscience, behavioral design, and your own wearable + health data.
Why now	Overstimulation, burnout, and decision fatigue are at epidemic levels — and no existing app connects the dots between data and daily action.
Emotional hook	"This isn't optimization. This is orientation."
Why us	The only EU-built, privacy-first, coaching/execution-first system that turns 10-pillar complexity into minimum-effective-dose daily action.

6.3 Content Formats (Owned Media)

Inner Lab Reports	Quick science-based breakdowns: sleep, dopamine, HRV, cortisol, vagal tone. LinkedIn + app educational layer.
Protocol Playbooks	Mini-guides for states: overwhelm, anxiety, decision fatigue, evening energy crash, post-travel recovery.
System Updates	Monthly digest: what's new at the frontier of sleep, nutrition, stress, and longevity science.
Founder's Story	Vlad's transformation — not hero narrative, but guide-through-collapse-and-regeneration. Authentic, vulnerable, grounded.
Letters to My Former Self	What I wish I'd known before the burnout. Shareable, emotionally resonant, community-building.

7. The SapiensOS Framework — 10 Pillars

The framework is the defensible IP. Every product, prompt, protocol, and content piece traces back to one or more pillars. Keep this table as the single reference for pillar naming in HealthSpan product work.

Pillar	Neurobehavioral Target	Intervention Types (examples)
Sleep	Circadian biology, sleep pressure, adenosine	Sleep hygiene, light/dark protocols, timing
Nutrition	Gut-brain axis, neurotransmitters, inflammation	Anti-inflammatory diet, micronutrient timing
Movement	BDNF, dopamine tone, metabolic flexibility	Energy regulation through structured movement
Stress Regulation	HPA axis, vagal tone, cortisol rhythm	Somatic tools, breathwork, recovery rituals
Light / Darkness	Melatonin, serotonin, cortisol entrainment	Natural light exposure, darkness rituals
Social Connection	Oxytocin, co-regulation, nervous system safety	Micro-interactions, boundary tools
Agency	PFC activation, learned helplessness reversal	Friction design, micro-habits, decision architecture
Meaning	Default mode network, narrative identity	Values tracking, existential reflection prompts
Rest	Parasympathetic tone, nervous system recovery	True rest vs. passive fatigue cycles
Curiosity	Dopamine drive, neuroplasticity, novelty	Joyful exploration, novelty scheduling

Important naming note: the O!Sapiens education brand uses "Mindfulness" where SapiensOS HealthSpan uses "Rest." All product-facing work (app, onboarding, prompts, UX copy) must use "Rest." Educational content under O!Sapiens brand may use "Mindfulness" contextually.

7.1 The 3-Stage Implementation Model

Each pillar is delivered in three stages — applicable to both app UX design and course curriculum:

Stage 1 — Understand	Neuroscience education. Why this pillar matters. What's happening in the body and brain.
Stage 2 — Practice	Habit formation. Minimum-effective-dose daily actions. Scheduled, not aspirational.
Stage 3 — Integrate	Long-term identity shift. The user becomes someone who does this — not someone who is "trying" to.

8. Competitive Positioning

8.1 The White Space We Own

None of our competitors are a privacy-first, EU-built, coaching/execution-first "behavior OS" that (a) is device-agnostic on wearables, (b) translates data into minimum-effective-dose daily actions across a holistic 10-pillar model, (c) is explicitly non-medical and education-only, and (d) targets EU high-performers at an accessible ~€1/day without capital-intensive labs or clinics. That is our lane.

8.2 Competitive Landscape

Competitor	What they do	Our differentiation
Function Health	\$2.5B US lab-testing unicorn. 160+ biomarkers, clinician-reviewed. Excellent data, no behavior change layer.	We execute. They inform. Different jobs.
Oura / WHOOP / Apple	Hardware-first data capture. Converging on AI coaching but surface-level, generic, not EU-privacy-first.	Wearable-agnostic. Deeper protocol. Privacy by design. Partners, not rivals.
Bryan Johnson Blueprint	Founder-led longevity protocol/supplement brand. Capital-intensive, US-centric, product-heavy.	Accessible. EU-focused. Behavior-first, not supplement-first.
Zoe	UK nutrition/microbiome science. CGM + testing. Science credibility strong.	We cover all 10 pillars. They own nutrition deeply. No competition.
Holo (Barcelona)	Local longevity analog. Watch closely as nearest geographic competitor.	Monitor positioning, partnership potential, differentiate on execution depth.
General LLMs / Free apps	Commoditizing base coaching rapidly.	Proprietary framework + behavior dataset + founder brand = defensible moat.

8.3 Defensible Moat (Priority Order)

- Proprietary behavior-change and outcome dataset — instrumented from day one
- Nervous-system-first 10-pillar framework depth — not replicable from a prompt
- Founder brand (Vlad) — authentic, Barcelona-based, warm-community distribution
- EU privacy-first posture — trust asset, not compliance checkbox
- Warm B2B community distribution — low-CAC, high-trust acquisition

9. Go-to-Market & Distribution

9.1 Acquisition Principles

Zero paid marketing. All acquisition is founder-led and relationship-driven. This is not a constraint — it is a feature. Our ICP is skeptical of ads and responds to credibility, community, and warm introductions.

LinkedIn (primary)	Vlad's 12K+ connections are warm and targeted. Thought leadership via Inner Lab Reports, Protocol Playbooks, founder story. Direct outreach to ICP.
Talks & events	Executive communities, founder events, longevity conferences, coworking speaker series. Spain + Cyprus first.
Direct outreach	Personalised DMs to ICP. Not cold — warm, value-led, specific.
Referrals	Build from day one. Early beta users who get results become advocates. Referral incentive TBD.
Warm B2B (Month 6+)	Coworkings, founder communities, professional groups. Not procurement — relationship distribution.

9.2 Geographic Sequencing

- Phase 1 (Months 1–6): Spain + Cyprus — founder home markets, warm networks, regulatory familiarity
- Phase 2 (Months 6–18): Germany, Netherlands, Nordics — high-income, health-conscious, strong wearable penetration
- Phase 3 (18M+): UK, Switzerland — English-language content leverage, high-value executive density

9.3 Pricing Model

Primary	€399/year ("~€1/day") — the anchor. Single, clear, defensible.
Basic tier (later)	€249–€299/year — reduced feature set. Not prioritised in Phase 1.
Pro tier (later)	€79–€149/month — for power users or B2B individual seats.
Clinician review add-on	Paid premium in Phase 2+ — individual clinician review of user protocol.
B2B pilot pricing	TBD — community/group license structure from Month 6.

9.4 Proof-Before-Build Principle

Validate demand with paid beta and deposits before committing engineering resources. Cashflow-first across every decision. The MVP scope is locked — resist feature creep.

10. Brand Manifesto

We live in an age of overload.

Too many opinions. Too many hacks. Too little clarity.

The world doesn't need another wellness trend. It needs a system that helps us think. Choose. Act. Feel.

At O!Sapiens, we don't promise hacks or instant calm. We offer something deeper: a return to inner agency.

Our tools are grounded in neuroscience, but our mission is human. We build protocols that respect biology and honor individuality.

We believe that resilience is not the absence of chaos, but the presence of inner architecture.

Sapiens OS is our framework — a system for modern minds that want to feel steady, clear, and aligned.

This is not about control. It's about coherence. Not optimization. But orientation. We are not your guru. We are your guide.

O!Sapiens — Clarity begins within.

11. Regulatory & Ethical Guardrails

These are non-negotiable. They apply to every output: app copy, marketing, onboarding, investor decks, social posts, press, and partnerships.

11.1 What We Are

- A lifestyle and wellbeing coaching app
- An education and behavior-change tool
- A psychoeducational complement to existing healthcare
- A privacy-first EU product that treats health data as sacred

11.2 What We Are Not

- A medical device (must remain outside EU MDR 2017/745 classification)
- A diagnostic, therapeutic, or monitoring tool
- A substitute for professional medical advice or treatment
- A clinical intervention or disease-prevention system

11.3 EU MDR Position

The app is and must remain a fitness/wellness application under MDCG 2019-11 rev.1 (updated June 2025). This is preserved by: intended purpose language (lifestyle/wellbeing, not diagnosis/prevention/prediction), avoiding disease-specific flags, not mapping biomarkers to disease risk in a way that constitutes "prediction/prognosis," and keeping AI as educational decision-support — not clinical decision-support.

11.4 GDPR / Article 9

Legal basis	Explicit consent (Article 9(2)(a)) layered on Article 6 basis. Double opt-in for all health data.
Data minimisation	Collect only what the coaching logic requires. No speculative data collection.
User control	Easy access, export, and deletion. Built into onboarding and settings.
Hosting	EU-hosted. No cross-border health data transfer without compliant safeguards.
DPO	Fractional DPO from launch. Full DPO as volume scales.

11.5 AI Act Consideration

AI software with a medical purpose can be classified as high-risk under the EU AI Act. Keep all AI outputs framed as educational lifestyle support. Avoid "prediction of illness" language. Never position AI as a clinical decision support tool.

11.6 Red Flag Protocol

Where user data or self-report indicates potential clinical risk (severe sleep disorder, acute burnout, clinical depression indicators), the app refers out immediately — to a GP, therapist, or relevant professional. Harm-reduction language throughout. This is also a legal protection and a trust signal.

12. Quick Reference Card

Use this as the fast-access cheat sheet for brand decisions, copy reviews, and team briefings.

Master brand	O!Sapiens
System / method	Sapiens OS
Commercial product	SapiensOS HealthSpan (iOS app)
Brand essence	"The science of self-agency"
Brand promise	Feel control — over your energy, your decisions, your life
App one-liner	"From health data to daily action: the longevity OS that makes healthspan habits stick"
Positioning	The EU's practical longevity operating system for high performers
Cultural tension	Everyone tells you what to do. We explain why it works — and make it stick.
Emotional hook	"This isn't optimization. This is orientation."
Primary colour	#191795 (O! Blue)
Primary fonts	Montserrat Bold (headlines) · Montserrat Regular (body) · Palatino (product names)
Pricing anchor	€399/year (~€1/day)
ICP	Exec/founders 35–55, Spain/Cyprus, Apple ecosystem, wearable owners
North star	150-year healthspan horizon (aspirational, never a medical promise)
What we never say	"Proven to..." · "Clinically tested" · "Prevents..." · "Treats..." · "Extend your lifespan"
Regulatory lane	Lifestyle/wellbeing app. Non-medical. Outside EU MDR. GDPR Article 9 compliant.
